

ADF

Monday, March 30, 2026 6:54 PM

1. copy
2. for each activity
3. loopup activity

Source —storage account (csv)

Destination - sql

1. one file at each time we moved
2. dynamic -dataset is dynamic we have sent parameters from the pipelines
3. lookup -we have used meta datatable as a reference to copy files from source to destination

1. I can copy all the file I don't have control

2. if there is a incremental data

60 rows---->60 rows

5 rows---->65

3. If file is missing at source I want to notify that the file is missing and proceed with other files

Getmeta activity vs lookup

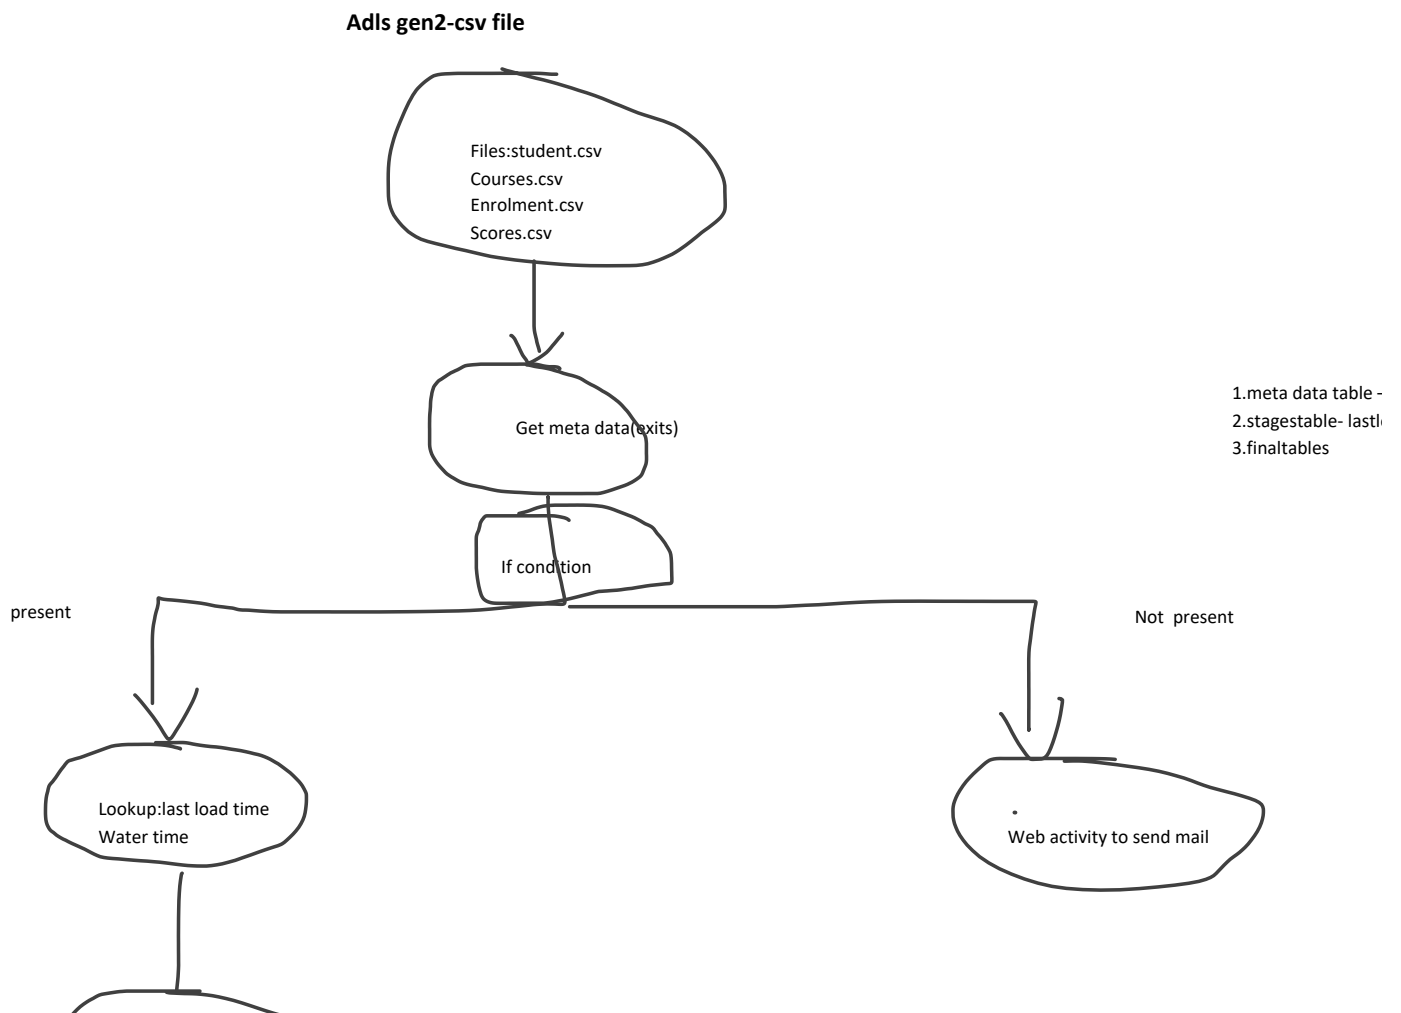

Staging tables

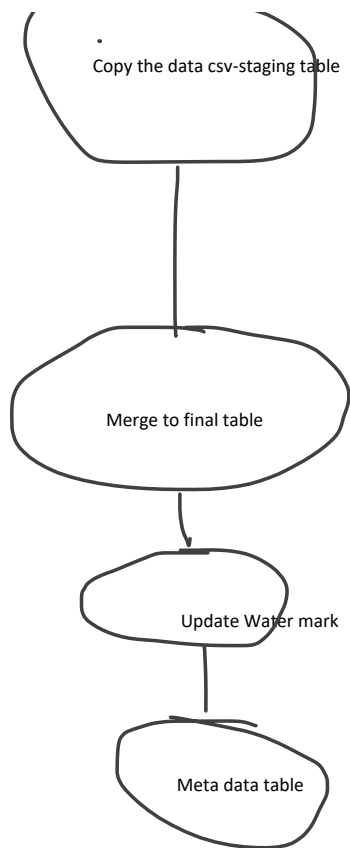

Water mark approach for incremental data

Notification using adf
